

ISRAEL MELOREN BINONGO

Full-Stack Web Developer

Southern Leyte, PH | 09306779112 | israelbinongo9@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

An aspiring software engineer proficient in TypeScript, React, and Next.js, seeking a role to apply versatility in developing efficient solutions in software development. Possessing a growing passion for emerging AI technologies and dedicated to leveraging tools in solving real-world problems. Proven to adapt to various domains in developing full-stack web applications, from UI/UX refactoring to complex backend logic.

EDUCATION

Visayas State University – Main Campus (Leyte, PH) **September 2022 – Present**

Bachelor of Science in Computer Science

- Member of Computer Science Student Society (CS3) Organization (University CS Organization)
- Relevant Coursework: Software Engineering (2026), Graphics and Visual Computing (2026), Event-Driven Programming (2025), Algorithms and Complexity (2025), Applications Development (2025), Data Structures and Algorithm (2024), Object Oriented Programming (2023).

SKILLS AND TECHNOLOGIES

- **Programming Languages:** C, C#, Java, Python, HTML, CSS, JavaScript, TypeScript
- **Database and Storage:** MySQL (Basic/Intermediate), SQLite, PostgreSQL
- **Frameworks and Tools:** .Net, React, Next.js, Vus, Nuxt.js, Supabase, Tailwind CSS, Git, GitKraken, GitHub, Weka, MS Power BI, Figma, Android Studio, Flask, Vercel, Render, Google Colab

PROJECTS

Frontend Development (UI/UX Refactor) – Academic Tracker **May 2026 - Present**

- Refactored 100% of the application’s legacy pages into modular components, significantly improving frontend maintainability and system scalability.
- Designed a mobile-first responsive UI utilizing Tailwind CSS, achieving compatibility across different screens resolutions.

Full-Stack Development – VSU USSC – Baybay OnTrack **February 2025**

- Led a 3-member development team as Technical Lead to architect and deploy a project management platform for the VSU - University Supreme Student Council using Next.js and Supabase.
- Automated deadline alerts and notifications using Supabase Edge Functions, streamlining organizational communication and improving project adherence.
- Integrated real-time budget tracking and progress analytics to provide transparent financial oversight for student-led initiatives.

Full-Stack Development – Class SchedEuler **November 2025**

- Engineered an automated scheduling engine with real-time conflict detection and a “Smart Suggest” tool that identifies optimal class slots based on the collective availability of students and instructors.
- Architected a dual-role interface allowing instructors to propose schedule changes via a threshold-based voting system while enabling students to manage enrollments with automated overlap resolution.

Frontend Development – Diabetes Check **October 2025**

- Developed responsive React 19 interface with TypeScript and Tailwind CSS, achieving full type-safety and mobile compatibility for critical health data entry.
- Integrated a custom asynchronous polling system to manage backend cold starts, ensuring reliable connection states and a seamless user experience during initial loads.

Backend Development – Fuzzy Diabetes Risk Assessment API **October 2025**

- Engineered a FastAPI backend using Pydantic for data validation, enabling accurate fuzzy-logic risk assessment based on four key physiological factors.
- Built a simple custom Python Library from scratch featuring centroid-based defuzzification and Mamdani inference to transform qualitative medical rules into quantitative results.

CERTIFICATIONS

- Introduction to Data Science – Cisco Networking Academy (September 2024)
